Education

University of California, Berkeley 3.6 GPA
Bachelor of Arts in Data Science and Statistics with Minor in Public Policy *Expected May 2029*
Relevant Coursework: Principles & Techniques of Data Science, Data Structures & Algorithms, Linear Algebra

Experience

Anyscale September 2026 – Present
Data Engineering Consultant
- Develop a config-driven Polars pipeline for an autonomous RC car platform that logs multi-sensor data, cleans the readings, and loads analysis-ready datasets for GPU-based model training.

Air Force ROTC Detachment 085 October 2025 – Present
Lead Engineer
- Trained machine learning models in Python (Scikit-Learn) on cadet performance data to identify training gaps, interpreting model output to inform detachment training decisions.
- Led development of an LLM-powered chatbot on Cloudflare Workers with real-time calendar integration and 30-message daily rate limiting, serving 100+ cadets.

Air Combat Command (US Air Force) May 2026 – August 2026
Data Science & Automation Intern
- Engineered an ELT pipeline and star schema data model integrating Palantir Envision with 500+ shared-drive folders into a weekly-refreshed Power BI dashboard delivering readiness insights to ACC's full colonel and brigadier general population.
- Constructed an ingestion and data validation pipeline processing 4,000+ personnel records through a multi-criteria decision-tree eligibility engine, validating outputs against manual review to reach 90% automated accuracy and cut 5+ hours of manual work weekly.
- Developed a unified senior-enlisted data model and proposed an automated talent-identification dashboard integrating readiness, PME, and performance datasets.

Sawyer February 2026 – May 2026
Product & Research Consultant
- Collected and analyzed 500+ customer product reviews across 100+ websites in one week, coding ergonomics feedback into a structured dataset to inform a consumer product prototype.
- Synthesized the analysis into actionable insights for non-technical product stakeholders, identifying which features drove the strongest customer response and directly influencing prototype direction.
- Brought the review findings into a cross-functional design review that narrowed 4 candidate prototypes to 1, incorporating feedback from stakeholders outside the product department.

Projects

Slack the Tape: LLM-Powered Market Data Assistant | *Python, DuckDB, SQL, MCP, Slack, Linux*
- Implement an automated ETL pipeline that ingests 1-minute equity bars into date-partitioned Parquet files queried with DuckDB, with idempotent re-runs and data validation, scheduled via cron on Linux (WSL).
- Design an MCP server and Slack LLM chatbot that give non-technical users plain-English access to market data through guarded query and reporting tools.

Military Aircraft Activity Pipeline | *Python, Polars, Pydantic, DuckDB, Prefect*
- Created an end-to-end data pipeline ingesting real-time telemetry from a live global ADS-B feed, processing 500+ aircraft per run through validation, transformation, and warehousing stages.
- Engineered derived flight-activity features (climb rate, acceleration, heading change, regional classification) from raw telemetry using Polars, with Pydantic schema validation enforcing data quality on every ingest.

Open-Source Roblox Systems | *Luau*
- Released seven open-source, server-authoritative Luau packages on a modular client-server architecture, designing a shared state-management service that arbitrates conflicting writes across independently installed packages.

Skills

Languages: Python, SQL, MATLAB, Java, JavaScript
Data Science & Statistics: Machine learning, classification, decision trees, linear regression, statistical analysis, hypothesis testing, A/B testing, exploratory data analysis (EDA), time series analysis, Scikit-Learn, Pandas, NumPy, Jupyter
Data Analytics & Engineering: ETL/ELT pipeline design, data modeling, star schema design, Parquet, DuckDB, PostgreSQL, Polars, Pydantic, Prefect, cron scheduling, Git
AI & Tooling: MCP server development, LLM chatbots (Gemini API), Slack integration, Linux
